Destination wedding is the latest trend followed by many people in which couples choose their desire location at local/ international places. In this type of wedding the number of guests is limited. This is also known as “Intimate wedding”. In this wedding customers require five-star quality facility.

In my website it contains three modules:

1.) **Users** : In this new customer or user have to create account freely or already registered user can simply log-in. After, that we will provide them many functionalities like:-

- Providing three level of package which is: “Gold, silver, platinum” which ranges from 5 lakhs to 25 lakhs.
- If they are not satisfied from inbuilt packages , then they can customise it according to their requirements which will generate a bill which they have to pay.
- Chatbot available to interact with admin and vendors to solve their queries.
- Whatsapp and calling assistant is provided to customers for one to one interaction with workers(vendors).
- After , successful competition of your wedding a QR code is mailed to registered user’s mail through which they can pay online

2.) **Admin:** The owner or manager of websites with all functional and critical privileges. Also , he has the power to restrict many customers and vendors from many functions if required. It has many functionalities:

- To interact with customers through calling / whatsapp.
- To provide them day to day updations.
- To allocate vendors/workers to each customer’s event.
- To provide vendor details to particular customers so that they can contact them directly in case of any queries.
- Providing payments to vendors for their services.
- Setting reminder and alerting customers on time of event.

3.) **Vendors:** The workers those who work on their assigned wedding on full time/part time basis . They also have some functionalities:

- To complete day to day task and keep updated to admin.
- Remain active to solve queries of customers.

Technology:

1. Django
2. AI and ML

3. Google map integration
4. Whatsapp and calling feature integration.
5. Augmented reality(360 degree view)

Mini Project:

Users: Functionalities provided:

- Providing three level of package which is: "Gold, silver, platinum" which ranges from 5 lakhs to 25 lakhs.
- If they are not satisfied from inbuilt packages , then they can customise it according to their requirements which will generate a bill which they have to pay..
- Whatsapp and calling assistant is provided to customers for one to one interaction with workers(vendors).
- Google map integration to find the location easily.

Admin:

- Maintaining databases of all customer and vendors
- Assigning vendors to particular events
- Always remain active to solve queries through whatsapp and calling facilities
- Provide services according to their selected packages
- Allow only authenticated and authorised user to use

Vendors:

- Provide services to assigned events
- Paying perks for their completed events
- Remain active to solve queries of customers through whatsapp and calling assistance

Main Project:

Users:

- To get famarilised with website and get more details about our services they can use chatbots
- Can pay through QR code mailed while registration.

Admin:

- Providing a online service through which unattended guest can experience the wedding .
- A 360 degree panorama through which they can view their desired location in a 3D mode

Language Preferences:

- **Frontend:** HTML/CSS
- **Backend:** Django
